

EFFICIENT *workspace*

West 8th's thoughtful architectural design enables tenants to get the most out of their space plans in both a single- and multi-tenant environment.

- The building's highly efficient bay depths accommodate both private offices and employee workstations on every side of its core.
- West 8th's rectangular-shaped design maximizes the efficient layout of executive offices situated along the periphery of the floor plate.
- Limited interior columns reduce space-planning constraints and enable a more flexible interior workspace design, helping tenants to realize critical operating efficiencies.
